

Claim Analytics

EMPLOYEE BENEFITS

Overview

Understanding the factors contributing to rising costs in medical and prescription plans can be challenging. Holmes Murphy addresses this complexity for you. Beyond simply analyzing past data, our proactive approach forecasts potential risks by considering various factors, such as disease prevalence, associated health conditions, and the associated costs and treatment frequencies for these health concerns.

Insights

Our Claim Analytics capability has three main objectives:

- **Trend Analysis:** Provides an in-depth review of medical treatment and pharmacy prescription cost and utilization.
- **Decision Support:** Provides clarity on which strategies and insights have the greatest potential impact on claims cost and the health of your employees.
- **Point Insight Evaluation:** Helps you recognize the effectiveness behind our strategies and insights. Our team can assess the performance of implemented initiatives, providing a confident and data-driven approach to refining your organization's benefits strategies.

Impact

Holmes Murphy's Claim Analytics capability enables your benefits leaders to optimize plans, cut costs, and enhance employee wellbeing with analytics that support informed decisions and expose opportunities to improve the performance of your plan.
